Subject: draft human health calculator spreadsheet
Date: Monday, February 11, 2013 1:23:10 PM

Hi Matt.

About a year ago you sent me a draft excel spreadsheet that calculates criteria based on varying FCRs and risk levels. I would like to expand the range of risk levels it accepts to include 10^{-4} (as is within EPA's range of acceptable risk for HHC). However, the spreadsheet is locked and appears to be saved as an "application", so I cannot modify it. Is there a way to have whoever developed that spreadsheet open up the risk range cell to a broader range of values – that includes 10^{-4} ? Or simply unlock the whole spreadsheet so that users could also modify reference doses etc if they are updated?

Thanks for looking into this for us.

Cheryl
